JOHN ALDEN LIFE INSURANCE COMPANY and TIME INSURANCE COMPANY
RATING PRACTICES
FORMS JGM.TRT.DE and TGM.TRT.DE
GROUPS OF 1-50 LIVES IN DELAWARE
EFFECTIVE 9/1/2012

These instructions explain the calculation methodology used in calculating new business and renewal rates under small group plans offered by JOHN ALDEN LIFE INSURANCE COMPANY and TIME INSURANCE COMPANY.

The rate manual attached (which contains the normal new business rate) is the starting point for all rate calculations. The rating factors contained in this manual adjust for allowable case characteristics and are applied uniformly to all groups.

The other component of the premium calculation is the Risk Adjustment Factor. The components of the Risk Adjustment Factor are industry, group size, health status, claims experience, and duration. Group size and industry are considered regular pieces of our rating algorithm and are included in this rate manual.

Small group reform legislation in most states limits the amount of variation allowed in premium rates. This limitation is usually expressed as an allowable variation from an "index rate".

This index rate is simply the average of the lowest possible rate and the highest possible rate for a specific set of case characteristics for a given plan of benefits.

The minimum rate allowed is 50% of the index rate and the maximum rate allowed is 150% of the index rate.

RENEWAL RATES

Upon renewal, a Desired Rate Increase is determined for the business renewing at that time.

This Desired Rate Increase is based on overall factors such as the loss ratio of the renewing block, business objectives and projected trend as well as factors specific to a group such as favorable claims experience.

The rate increase on any group is limited by state law to the change in new business rates since the last rating period plus 15% plus the change due to a change in case characteristics.

If the Desired Rate Increase for a particular group is greater than the maximum allowed according to the above rules, it is reduced to the maximum allowable.

The renewal rate for a group is calculated as the manual rate at the renewal date multiplied by a revised Risk Adjustment Factor.

The revised Risk Adjustment Factor is determined by multiplying the old Risk Adjustment Factor by the portion of the Desired Rate Increase in excess of the change in manual (new business) rates from the prior to the current rating period.

If the Risk Adjustment Factor calculated above falls outside the allowable range, it is set to the allowable limit. The renewal rate is then recalculated using the acceptable Risk Adjustment Factor.

Procedure

Step 1 Find the appropriate Medical Base Rate (Section I) using the age and gender of the applicable employee or spouse. Find the per child rate for each dependent child (maximum of 3).

Step 2 If the group chooses maternity same as any other illness, find the appropriate Maternity Add-on (Section II) to add to the employee or spouse rate from Step 1. Rates vary as to whether the group has 1-4 employees, 5-9 employees, or 10+ employees.

Step 3 Multiply the rate from Step 2 by the appropriate Plan Variation Factor (PVF in Section III).

Step 4 Using the county/zip of the group, find the appropriate Rate Area from the Rate Area Table (Section IV) and find the appropriate Rate Area Factor (RAF in Section III). Calculate the factor and multiply by the result of Step 3.

Step 5 Calculate the Global Trend Factor (Section V) and multiply the result of Step 4 by this factor.

Step 6 Using the number of employees, find the appropriate Group Size Factor (Section VI) and multiply the result of Step 5 by this factor.

Step 7(a) If the group selects the Indemnity network, use the county/zip of the group to find the appropriate Indemnity factor (Section VII) and multiply the result of Step 7 by this factor. If the group select a different network, multiply Step 6 by 1.000

Step 7(b) Using the network and managed care type of the group, find the appropriate Network Factor (Section VII) and multiply the result of Step 7(a) by this factor.

Step 8 Using the county/zip, network, and managed care type of the group, find the appropriate Managed Care Factor (Section VIII) and multiply the result of Step 7(b) by this factor.

Step 9 Using the county/zip of the group and the Regional Trend Factor Table, find the appropriate Regional Trend Factor (Section IX) and multiply the result of Step 8 by this factor.

Step 10 Using the Managed Care Trend Table, find the appropriate Managed Care Trend Factor (Section X) and multiply the result of Step 9 by this factor.

Step 11 Using the industry classification of the group, find the appropriate Industry Factor (Section XI) and multiply the result of Step 10 by this factor.

Step 12 Using the Rate Period selected by the group, find the appropriate Rate Period Factor (Section XII) and multiply the result of Step 11 by this factor.

Step 13 Using the deductible selected by the group, find the appropriate Plan Adjustment Factor (Section XIII) and multiply the result of Step 12 by this factor.

Step 14 Using the Preventive Benefits table, find the appropriate Preventive factor (Section XIV) and multiply the result of Step 13 by this factor.

Step 15 Using the Lifetime Max table, find the appropriate Lifetime Max factor (Section XV) and multiply the result of Step 14 by this factor.

Step 16 Using the AME table, find the appropriate AME Factor (Section XVI) and multiply the result of Step 15 by this factor.

Step 17 Using the DXL table, find the appropriate DXL factor (Section XVII) and multiply the result of Step 16 by this factor.

Step 18 Using the Common Family table, find the appropriate Common Family factor (Section XVIII) and multiply the result of Step 17 by this factor.

Step 19 Using the ER Copay table, find the appropriate ER Copay factor (Section XIX) and multiply the result of Step 18 by this factor.

Step 20 Using the Office Visit table, find the appropriate Office Visit factor (Section XX) and multiply the result of Step 19 by this factor.

Step 21 Using the MNSA table, find the appropriate MNSA factor (Section XXI) and multiply the result of Step 20 by this factor.

Step 22 Using the TX MNSA table, find the appropriate TX MNSA factor (Section XXII) and multiply the result of Step 21 by this factor.

Step 23 Using the TMJ table, find the appropriate TMJ factor (Section XXIII) and multiply the result of Step 22 by this factor.

Step 24 Using the Outpatient Therapy table, find the appropriate Outpatient Therapy factor (Section XXIV) and multiply the result of Step 23 by this factor.

Step 25 Using the Continiuum of Care table, find the appropriate Continiuum of Care factor (Section XXV) and multiply the result of Step 24 by this factor.

Step 26 Using the Carryover table, find the appropriate Carryover Factor (Section XXVI) and multiply the result of Step 25 by this factor.

Step 27 Using the Workers Compensation table, find the appropriate Workers Compensation factor (Section XXVII) and multiply the result of Step 26 by this factor.

Step 28 If the group chooses the Employee Level Selection option, find the Plan Combination Factor as Section instructed and multiply the result of Step 27 by this factor.
Otherwise, multiply the result of Step 27 by 1.000.

Step 29 A monthly administrative fee of $25 is added to the group's rate.

Employee Level Selection: Plan Combination Factor

For groups which choose more than one plan:

(1) Calculate the value of each plan in the following manner:

V = PVF * (RAF ^ RA-1) * TMJ * CF * MNSA * OT * AME * CC * CF * WF * NF * ER * TXF * LMF * PA / PIF

where PVF is the Plan Variation Factor (Sec III)
and RAF is the Rate Area Factor (Sec III)
and RA is the applicable Rate Area (Sec IV)
and TMJ is the TMJ Factor Factor (Sec XXIII)
and CF is the Common Family Factor Factor (Sec XVIII)
and MNSA is the Mental/Nervous/Substance Abuse Factor Factor (Sec XXI)
and OT is the Outpatient Therapy Factor Factor (Sec XXIV)
and AME is the Accidental Medical Expense Factor Factor (Sec XVI)
and CC is the Continiuum of Care Factor Factor (Sec XXV)
and CF is the Carryover Factor Factor (Sec XXVI)
and WF is the Wellness Factor Factor (Sec XIV)
and NF is the Network Factor Factor (Sec VII.B)
and ER is the Emergency Room Copay Factor Factor (Sec XIX)
and TXF is the TX Mental/Nervous/Substance Abuse Factor Factor (Sec XXII)
and LMF is the Lifetime Max Factor Factor (Sec XV)
and PA is the Plan Adjustment Factor Factor (Sec XIII)
and PIF is the applicable PPO Index Factor (Sec Sec VII.B)

(2) Divide the largest value among the plans by the smallest value to calculate the Plan Relativity.
Round to the nearest value in the Plan Relativity column on the PCF table.

(3) Using the Plan Relativity and the ratio of the number of employees with medical coverage to the number of plans selected, find the correct PCF (Plan Combination Factor) and multiply the PVF by this factor.

Exhibit III - Outline of Factor Changes
Effective - 9/1/2012

V. Global Trend Factor

Trend Factor = 15.1067 * (1.0132^N)
Where N is the number of months from 9/12 to the Case Effective Month

Breakdown of how the 9/1/2012 trend factor was derived:
13.4969 was the 8/11 trend factor
11 months of trend from 8/11 to 7/12
*14.7156 = 13.4969 * (1.00789 ^ 11)*
8/12 (trend was previously only approved through 7/12)
Upon approval, trend factor will change to 1.32% per month to match nationwide trend.
9/12 trend factor will include a one-time trend adjustment to account for trend that was held in 8/12
15.1067 = 14.7156 * (1.0132^2)
